

Add funds to your CoinDCX Futures wallet

AlgoPulse can only trade with money that is inside your CoinDCX **Futures Wallet**. Money in your INR Wallet or Coins Wallet is invisible to your strategy. This takes about 2 minutes in the CoinDCX app.

CoinDCX mobile app · Updated Sep 2026

YOUR 3 COINDCX WALLETS

INR Wallet

Rupees you deposit by UPI or bank transfer land here.

Coins Wallet

Crypto you buy, including USDT, sits here.

Futures Wallet

The only wallet AlgoPulse trades from.

Transfers between your own wallets are instant and free. CoinDCX shows “No fees on Transfers” on the transfer screen.

Screens from the CoinDCX Android/iOS app, Sep 2026. Button names may change slightly with app updates. Crypto futures are high-risk; only trade money you can afford to lose.

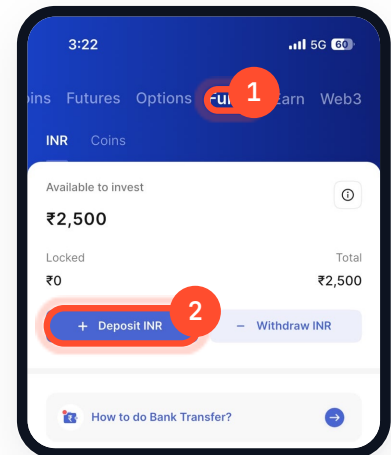

Step by step

- **Works with AlgoPulse today.** Your strategies place USDT-margined orders, so your Futures Wallet needs **USDT**, not rupees.

1 Deposit rupees

Portfolio > Funds > INR > Deposit INR

Tap **Portfolio** in the bottom bar, open the **Funds** tab, then **Deposit INR**. Pay by UPI or bank transfer and wait until the amount shows under *Available to invest*.

1 Funds tab · 2 Deposit INR

2 Buy USDT with your rupees

Search > USDT > Buy

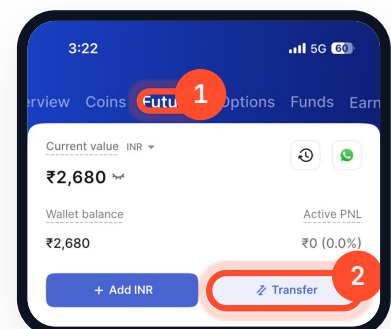

Search for **USDT** (Tether), tap **Buy**, enter how many rupees you want to spend and confirm. The USDT arrives in your **Coins Wallet**.

At the time of writing 1 USDT ≈ ₹99. Buy a little extra to cover trading fees.

3 Open Futures and tap Transfer

Portfolio > Futures > Transfer

Go back to **Portfolio**, swipe to the **Futures** tab and tap **Transfer**.

1 Futures tab · 2 Transfer

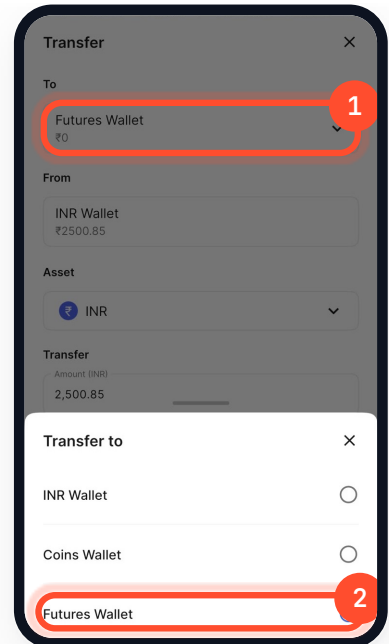

4

Move USDT into the Futures Wallet

Tap the **To** box and choose **Futures Wallet**. Then fill in the rest:

To	Futures Wallet
From	Coins Wallet
Asset	USDT
Amount	How much USDT to move

Tap **Transfer to Futures Wallet**. If *From* doesn't show Coins Wallet, change *Asset* to USDT first.

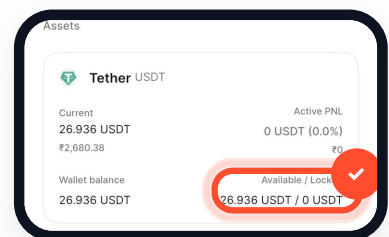

1 Tap "To" · 2 Choose Futures Wallet. This example moves INR; for USDT, set Asset to USDT.

5

Check the balance arrived

On the **Futures** tab, scroll to **Assets**. The **Tether USDT** card should show your amount under *Available*. That is the money AlgoPulse can trade with.

Available USDT = ready for your strategy

Then deploy on AlgoPulse

With money in your Futures Wallet, go to **AlgoPulse** → **Brokers** → **Add Broker** → **CoinDCX**, paste an API key with **Futures** and **Trade** turned on (Withdraw off), then deploy a strategy.

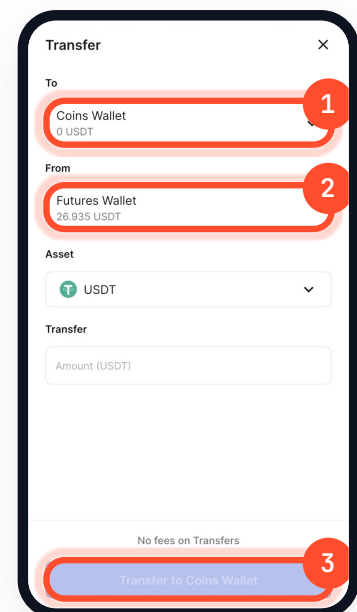

Each trade must be at least this size on CoinDCX. Trade size = investment × position size % × leverage.

COIN	MIN TRADE SIZE	MAX LEVERAGE
BTC	\$60	20x
ETH	\$24	20x
XRP · DOGE	\$6	10x
SOL	\$6	5x

Moving money back

Use the same **Transfer** button on the Futures tab. Set **To** to **Coins Wallet**, keep **Asset** as USDT, enter the amount, and tap **Transfer to Coins Wallet**.

Stop your AlgoPulse strategy first. Money held as margin in an open position is locked and can't be moved until that position closes.

1 To: Coins Wallet · 2 From: Futures Wallet · 3 Transfer

Common problems

AlgoPulse says “Insufficient funds”

Your Futures Wallet has no USDT. AlgoPulse needs USDT in the Futures Wallet, so rupees moved there won't count. Repeat steps 2–4.

I bought USDT but can't see it in Futures

Buying puts USDT in your Coins Wallet. You still need to transfer it: Futures tab → Transfer → To: Futures Wallet, Asset: USDT.

The Transfer button is greyed out

Enter an amount first. It must be more than zero and no more than the balance shown under “From”.

My deploy is blocked for being too small

Your trade size is below CoinDCX's minimum for that coin. Raise the investment, position size or leverage until it clears the table above.
